

Countries Supported by the SolarEdge Inverters

The SolarEdge inverters can be used in many different countries. This document details countries where SolarEdge approves installation of its inverters. Installation should always be done in compliance with local regulations, and in case of a conflict between local regulations and this document, local regulations apply.

Summary

The SolarEdge inverters may be installed in the following countries. Unless stated otherwise, the approval refers to low voltage installations. For medium voltage installations, please contact SolarEdge support. Please refer to the country details below for more information, as in some countries not all grids are supported or not all inverter models are supported.

In supported countries, connection of supported inverters to non-supported grids is permitted through a transformer, if the secondary connection (transformer connection to the inverter) is identical to a supported grid.

NOTE

Transformer procurement, installation, maintenance and support are the responsibility of the installer. Damage to the inverter due to incorrect transformer installation or use of a transformer that is incompatible with the SolarEdge system will render the SolarEdge warranty invalid.

NOTE

Prior to purchasing a StorEdge system verify battery availability and service in the country. Availability of SolarEdge StorEdge products does not guarantee battery availability.

A country listed in **bold** indicates that StorEdge Inverters with backup are approved for installation in that country.

NOTE

The StorEdge Inverter must be connected Line to Neutral (and not Line to Line).

Detailed Information per Country

The table below details for each of the above countries:

1. Supported inverters: which SolarEdge inverters may be used in the country
2. Inverter country setting: to what country setting the inverter should be configured in order to comply with the local grid requirements. Some countries have a submenu that should be used; sub-entries are indicated with the following symbol: ->
3. Frequency: the nominal inverter AC frequency for the corresponding country setting
4. Comments: additional information about the inverter and grid support
